

PLASDEC

Company Presentation

About PLADEC

PLADEC is a portuguese designer and manufacturer of cladding solutions for walls and furniture.

We're internationally recognized as a high-end carpentry - but it's so much more than that.

In aim of sustainable and artistic purposes, we invest in machinery that allows us to create infinitely:

- CNC
- Laser cutting
- Carpentry
- Lacquering / varnish /treating
- Metalworking
- Ovens, presses and other machinery

About PLAMMETAL

At PLAMMETAL, we create unique facades and artistic sculptures using one of the most durable materials: metal.

See more at www.plametal.pt

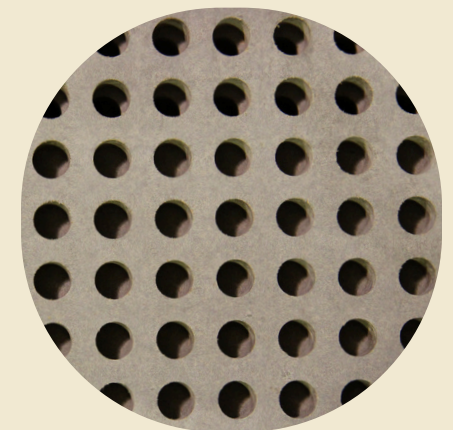

Investing in technologies allowed us to create two different solid brands: PLACUSTIC and PLAMETAL.

We also create unusual acoustic perforated panels through one of our brands PLACUSTIC. With a capacity for high daily output (over 150 square meters / day, we're able to step-up to high-quantity projects with great prices.

There's also some collections where you'll find everything we do.

Origami

A series of custom-made wall mosaics.

The collection consists of complex patterns made from MDF or wood. Individually machined and carefully applied to a board, these pieces are combined to create a stand-out effect that makes everyone stop to admire it.

The panels have several finishing options, from woods and laminates to patina finishes.

Ripados (slat)

Slat panels with an MDF basis and natural wood finishes for a high-end and balanced design.

Sizes up to 2400mm by 1200mm.

Slats in oak and walnut.

[Download the catalog here!](#)

Cork

We work with cork using CNC machining and molds to create three-dimensional textures, both in natural cork and black cork.

Available in mosaic or modular solutions, depending on the reference.

Talk with a representative

Concrete

We manufacture tiles and integral concrete products in a custom basis.

A standard collection of some tiles is available upon request.

Talk with a representative

Flexible ribbed panels

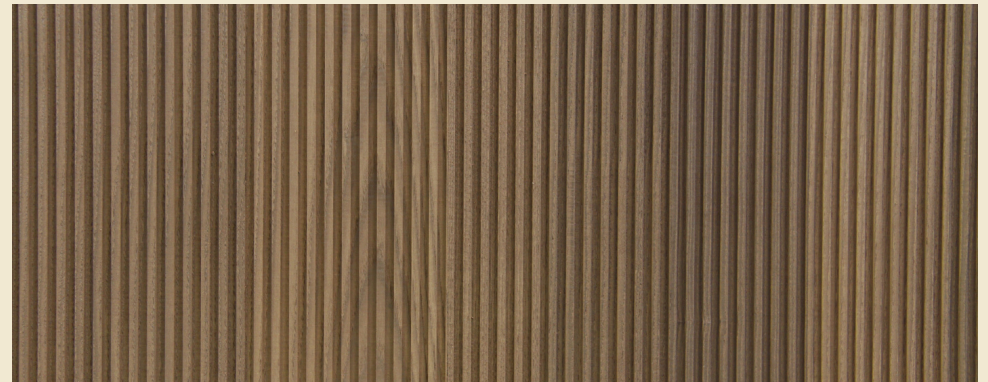

We manufacture ribbed and textured wood panels with linear designs.

These panels are available in oak, walnut, ash, heat-treated ash and MDF.

There are more than 30 references available for you to choose from.

The standard size is 2400 mm by 1200 mm, but there's an option to increase the height up to 2700mm upon request.

The panels have variable thicknesses between 6-12mm.

Metal

We manufacture mosaics with real metal finishes, namely brass, copper and zinc.

The mosaics are tridimensional or flat, with variable heights and with different oxidations.

We have a collection of more than 30 mosaics at our disposal and we are willing to make personalized designs.

Additionally, we have a certain degree of control over oxidation - there is the possibility of creating unique and variable colors.

Mini-Textures

Mini-Textures are machined wooden panels with a 6mm textured layer of natural wood and an MDF base.

These panels come in a standard size of 2400mm by 1200mm, and can be finished in oak, ash, heat-treated ash, walnut and MDF.

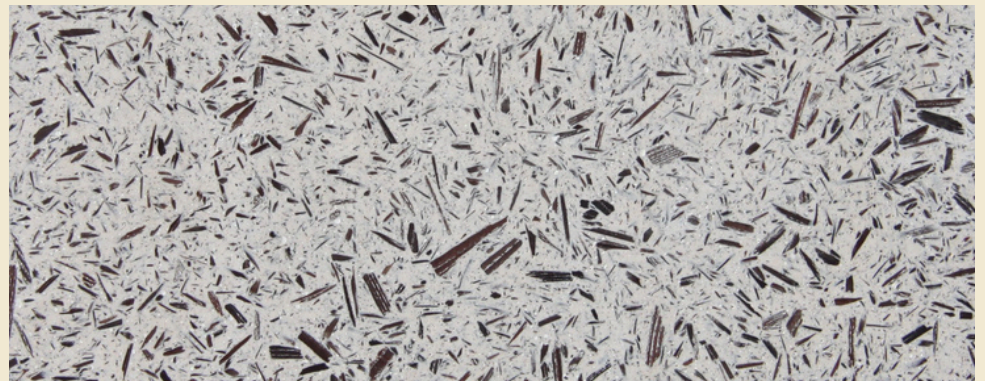

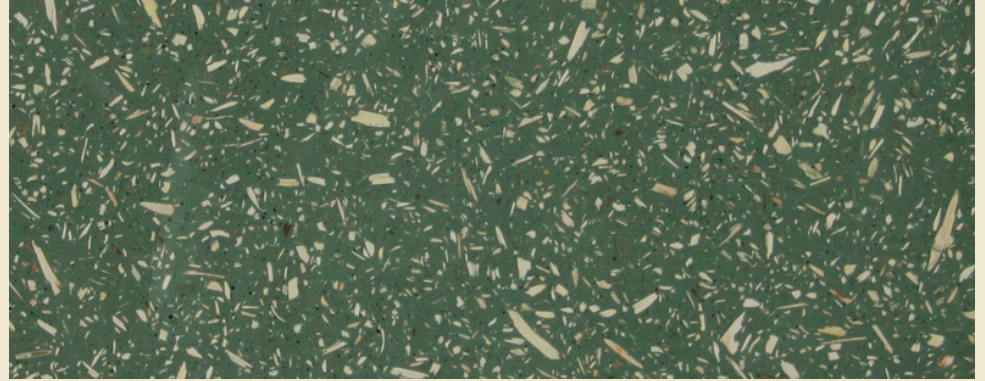

There are several references and we can also create custom textures.

Terrazzo

We create custom terrazzo panels with integrations of wood and other irregular materials.

Talk to a representative

Madeira

Our oldest collection that remains due to its timelessness.

We create coverings with all types of natural wood.

In some models, the rustic texture of cracked wood is used to create a sensation of movement along the walls.

In others, we use finishes such as silver leaf, stains, varnishes and even fabric coatings to add another touch to the three-dimensionality of the pieces.

There are several references, all of which can be customized to some extent.

Talk to a representative

Ecologic

We recycle biological waste of various types to create three-dimensional mosaics or smooth panels.

The source material for these collections are common waste: coffee grounds from local cafes, forest waste from forest thinning necessary to prevent fires or even vine pruning, among many others.

There are several manufacturing possibilities and various applications, from walls to furniture.

Additionally, the mosaic retains the aroma of the material that makes it up, that is, any panel made from eucalyptus will have a small smell that can be smelled close to the wall.

Recycled Finishes

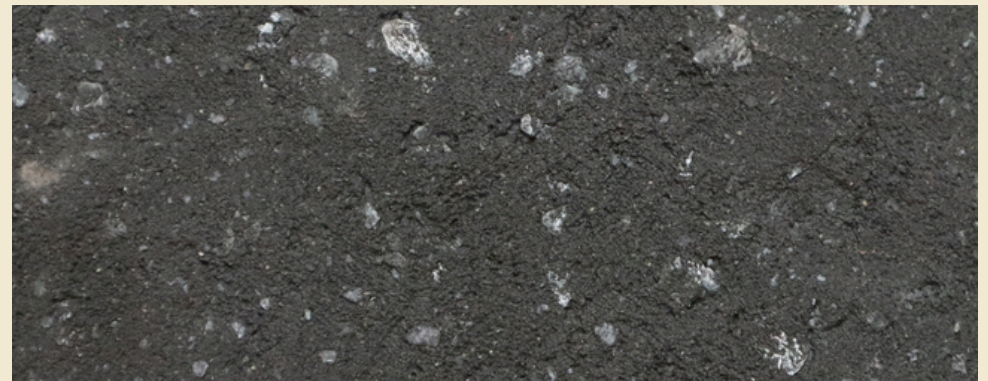

New collection!

Through the reuse of ceramic, mineral and soil waste, we were able to recreate this material in the form of a plaster for application on all types of surfaces.

The textures obtained have a rustic appearance that can be worked manually. Each texture corresponds to a color and a certain grain that have its own charisma.

This material adheres well to various surfaces.

The collection is still expanding and is available in the form of plaster, finished panel or mosaic

Catalogue

Services we provide

Metalworking

Digital Printing

CNC Perforation

CNC Milling

Serralharia

We create all sorts of metal products from standard or corten steel, with a focus on artistic products.

PLAMETAL

[See the website](#)

Flower vases

Artistic and decorative metal panneling

Fire pits and grills

CNC milling and perforation

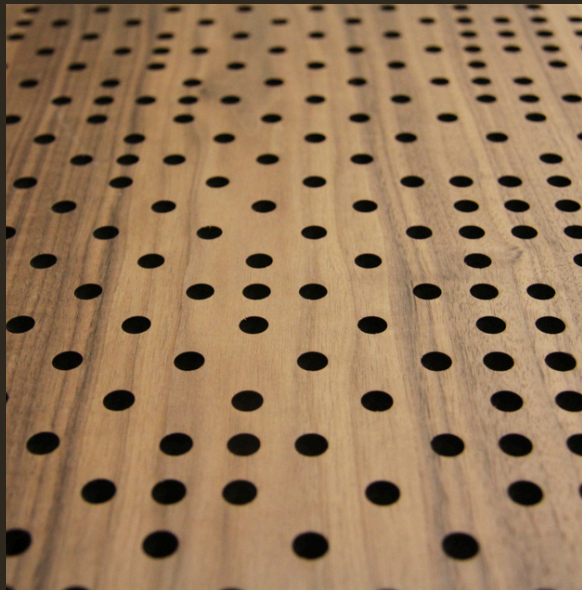

We have at our disposal several CNC milling machines to create all types of works. From festival stages to roof structures, this technology is extremely versatile and allows you to transform digital designs into reality without the need for manual labor.

Find out what we can do for you and contact a sales representative.

Wood textures

Wood perforations

Pre-designed structures

Digital printing

We print wallpaper and custom canvas to create vivid imagery and decorations for interiors.

Wallpaper

Custom Canvas

Rigid format printing
